Conversational Level (Fluent in work-related conversations, including complex topics)

EDUCATION

Bachelor of Electronic Circuit Engineering (4th year)

Technological University Taunggyi

- (Currently on hiatus)

Production Project Experiences on -

Digital Banking Live Status - (At KBZ Bank)

This project is mainly about implementing a real-time data tracking feature while more than one user is using the website on different devices. The main algorithm exists in how we do when every admin is adding tasks simultaneously and changing the real-time data as soon as the changes happen and showing it to the user. This feature provides instant updates on live status values.

There are three main requirements changes in this project

According to the changes of business requirements, we change tech stack for three times

First Tech stack => Vite, Serverless(Lambda) with AWS s3

Second Tech stack => Vite, Express with SQLite

Third Tech stack => Remix Serverside with Prisma and SQLite

Backoffice - (At SKI Technology)

This project was undertaken to gain insights into intricate front-end system structures. It encompasses the management of office transactions and the recording of monthly salary disbursements. The project served as an invaluable lesson in mastering the art of organizing complex frontend logic and effectively managing global states as projects scale. It highlighted the critical role technology stack selection plays, emphasizing that early missteps in project setup can lead to challenges in later structural adjustments

Tech Stack => ReactJs, Typescript, MUI, i18next, Redux Toolkit, JWT Auth

There are a lot of features within the project like record filtering and designing the table and implementing the logic of the payment and responsive design ..

Wealth Investment Project - (At SKI Technology)

Led the front-end development of a financial management platform focused on handling customer investments. Implemented a robust authentication system using JWT to ensure secure user access. Designed and optimized intuitive user interfaces, providing a seamless experience for clients to manage their investment portfolios. Collaborated closely with backend developers to integrate real-time data updates. Utilized cutting-edge technologies to create responsive and visually engaging dashboards, empowering users with transparent insights into their financial activities. Successfully delivered a user-friendly and secure frontend solution, contributing to the overall success of the customer investment management project.

Tech Stack => ReactJs, Tailwindcss, MantineUI, Redux Toolkit, i18next, JWT Auth

All of my projects can be found here on my portfolio project page

SAI HLYAN PHYOE

FRONTEND DEVELOPER

Application for Frontend Developer Position

I am thrilled to express my interest in the Frontend Developer position at your company. With a track record of creating immersive and responsive user interfaces, I am confident in my ability to bring valuable contributions to your team.

In my previous roles, I successfully made frontend development projects, collaborating closely with cross-functional teams to deliver visually appealing and highly functional websites. My expertise in ReactJs, CSS, and NextJs, coupled with a keen eye for design, enables me to create seamless user experiences.

My dedication to staying ahead of industry trends, coupled with my enthusiasm for adopting new technologies and continuous learning, positions me as a valuable asset in a fast-paced environment. This adaptability ensures that I not only meet the current standards but also anticipate and embrace future advancements.

I am genuinely excited about the opportunity to apply my frontend development skills to contribute to the company's creation of exceptional digital experiences. Thank you for considering my application. I am eager to discuss in more detail how my skills align with your team's vision.

Sincerely,
Sai Hlyan Phyoe
